

**Self-Assessment form internship 2023-2024**

Student: Laura Student number: 500844365	First assessor (AMFI supervisor): Rianne Werkhoven	Second assessor:
Graduation specialisation: FD / FBD / FB	Internship company: De Waag	Internship position: Fablab Intern

COMPETENCY	PRODUCT	AMFI BACHELOR LEVEL INDICATORS	ASSESSMENT CRITERIA	ASSESSMENT LEVELS					REFLECTION
RESEARCH	Internship plan	Has broad knowledge of and insight into the role that the internship position has.	Substantiates choice / motivation for and learning goals within chosen internship company and position.	Excellent	Good	Sufficient	Marginally insufficient	Insufficient	I have written about De Waags structure and have substantiated my learning goals in this internship in the internship plan. I have achieved 4 out of the 5 goals. Halfway in I decided to let one goal: the softrobotics one (number 3) go. I think making this choice was a right decision to do, however, I did not foresee it from the beginning. I think more research into the project goals could have already helped me further down the process when I understood that other, unexpected goals, where more valuable for my project. The unexpected goals, such as coloration, 3D printing with biomaterials and the scaling showed my critical attitude and my passion for creating connections. I have been able to work with the other labs within De Waag to work interdisciplinary on my project. By connecting the Fablab, de Textilelab and de Wetlab I have made connections through all labs and made them work together. For example: I used the 3D printer from the Fablab to print Biomaterials created in the Wetlab while colouring those materials with rest water from the natural dyes in the TextileLab.
	Process book								
	Company visit	Has broad knowledge of and insight into the internship company and how it is connected to the fashion industry.	Identifies and describes the company structure and culture. Uses relevant and up to date sources to identify and analyse the company DNA, products / services, the market positioning, and target group.						
	Final assessment presentation		Demonstrates a critical, inquisitive attitude and makes connections.						
DECISION-MAKING	Process book	Is able to develop complex, innovative and strategic solutions that align with a complex context.	Uses own knowledge and creativity to realise ideas or solutions in a professional manner and in line with learning goals / personal development.	Excellent	Good	Sufficient	Marginally insufficient	Insufficient	I have worked consistently on a massive project that I will continue during my graduation project. The project I am doing is an internship and graduation project and oversees 1 whole study year. Working consistently on small things while not loser the bigger picture is key to finalise my project. This includes making strategic choices, such as leaving the soft robotics part behind as an extra that I can work on later, if I don't get pressured by time in my process. However, the choice of leaving soft robotics behind to explore later, is choosing to leave one of my project goals behind. In exchange for that I explored new paths within my internship, such as 3D printing with a biomaterial printer and coding a website + coding to the 3D printer.
	Company visit								
	Final assessment presentation	Makes choices based on relevant data and considers social, professional, ethical aspects.	Experiments to explore new paths.  Is able to think about project goals and priorities at metalevel and is able to make strategic choices.						

<b>ACTUALISATION</b>	Process book	Demonstrates a professional approach from a fashion perspective.	Realises the transition from idea / solution to product / service in a creative and persuasive manner.	Excellent	Good	Sufficient	Marginally insufficient	Insufficient	I started this internship with an idea of a biodegradable collection. Half a year in I have my materials and finishings on bigger scale to start producing my garments. To get from the starting point to where I am now, I have used much acquired knowledge from the Textiles minor and the Hypercraft specialisation. While doing this, I have kept my colourful and experimental identity in the materials that I make and connected it to my passion for Extinction Rebellion.
	Company visit								
	Final assessment presentation	Takes action in an innovative, responsible and creative manner.  Is able to translate a persuasive personal vision into a product / service for the fashion industry.	Uses demonstrably acquired knowledge and skills to do so.  Demonstrates evidence of personal vision and development in actualisation process.						
<b>PRESENTATION</b>	Process book	Communicates persuasively, authentically and at a professional level, with consideration for the complex context.	Demonstrates ownership of acquired knowledge and skills in context of the personal development.	Excellent	Good	Sufficient	Marginally insufficient	Insufficient	Finding ownership in acquired knowledge was in the beginning hard for me, cause all the machines and information were so new to me. Now however, I feel that I am ready to work with all the machines and I understand the basics in coding. I have to teach all my knowledge to the new intern who is coming in in 2 weeks. This will be the perfect test to showcase my ownership of the knowledge.  My process document is a website via GitHub. That is one of the requirements of De Waag. Therefore, my process document fits the company perfectly.
	Company visit								
	Final assessment presentation		Process book has been written professionally, structured and lay-out is in line with the DNA of the company.						
<b>REFLECTION</b>	Internship plan	Develops in learning goals / competencies through reflection on own work and actions.	Reflects on the development within learning goals / competencies.	Excellent	Good	Sufficient	Marginally insufficient	Insufficient	I have reflected on my development by writing my midterm reflection and by looking weekly at what I did and how I could take next steps in the week after. While doing this I did not lose my bigger project out of sight. However, in my process documentation I did not specifically note down the reflections weekly. They are more intertwined with the whole story. I think this way of working fits De Waag also better – De Waag is not such a static place where people reflect on purpose weekly, but more when it naturally comes to you.  Furthermore, I am not done with this project yet. Now I am turning into the design phase of my graduation project, where I will take my materials into the next phase and start turning them into garments.
	Process book								
	Company visit	Is open to feedback / feedforward, reflects and acts accordingly, takes responsibility for own conduct.	Demonstrates insight into personal development, qualities, and limitations.  Is able to identify development opportunities for the future.						
	Final assessment presentation								
<b>ORGANISATION</b>	Internship plan	Takes responsibility for their own work and the study process.	Works strategically and goal-oriented.	Excellent	Good	Sufficient	Marginally insufficient	Insufficient	I am a very organized worker. As I already mentioned above, working on such a big project needs organisation. Without seeing the little steps in the big picture, I would be unable to be where I am now. Deciding which side paths are worth exploring, and which I need to leave behind, putting in the work to explore those paths and then filtering the information that was helpful is key to my organisation process. Reflection helps with that.
	Process book								
	Company visit	Takes responsibility for self-development and results of own work. Enters into active collaboration within / outside of the company to achieve learning and project goals.	Has a proactive and professional work attitude (information, agreements, time etc.)						
	Final assessment presentation
